

My 3 Personal Achievements:

1. Contributed to a project with real business impact

Built and contributed to GaneshaGoods, an OSKM merchandise platform using React, Go, and PostgreSQL. The platform supported product browsing, checkout, payment tracking, QR-based pickup, reimbursements, giveaways, and admin management. Generated approximately IDR 800 million in gross revenue and IDR 500 million in net profit.

2. Contributed to high-profile media production activities

Worked as part of the Narasi TWK production team, collaborating with public figures, celebrities, and creative professionals in a fast-paced media environment. This experience improved my communication skills, professionalism, adaptability, and ability to work under pressure during live or high-profile production activities.

3. Maintained strong academic performance in Computer Science ITB

Maintained strong academic performance as a Computer Science student while actively working on software development projects and organizational activities. This achievement shows my ability to balance academic responsibilities, technical learning, and real-world project involvement.
