

Chosen Project: Periplus Test Case

1. What is a Test Case?

A **test case** is a set of conditions or steps used to verify whether a feature works as expected.

Components of a Test Case

A good test case usually includes:

1. **Test Case ID**
A unique identifier, for example TC_LOGIN_001.
2. **Test Scenario / Title**
A short description of what is being tested.
3. **Preconditions**
Conditions that must be met before running the test.
4. **Test Data**
Input data used during testing, such as username, password, product ID, or payment details.
5. **Test Steps**
Step by step actions to perform.
6. **Expected Result**
The result that should happen if the system works correctly.
7. **Actual Result**
The real result after executing the test.
8. **Status**
Pass or fail.
9. **Priority / Severity**
How important the test is or how serious the issue is if it fails.

Example of a Well-Constructed Test Case

Test Case ID: TC_CHECKOUT_001

Test Scenario: Verify that a user can successfully checkout a product.

Priority: High

Precondition: User is logged in and has at least one product in the cart.

Test Data:

- Product: OSKM T-shirt
- Quantity: 1

- Payment Method: QRIS

Test Steps:

1. Open the cart page.
2. Click the checkout button.
3. Fill in the required delivery or pickup information.
4. Select the payment method.
5. Click “Place Order”.
6. Complete the payment process.

Expected Result:

The system successfully creates an order, redirects the user to the payment page, updates the payment status after payment, and displays the order in the user’s order history.

Actual Result:

The order was created successfully and appeared in the order history.

Status: Pass

2. Automated Test Code for Periplus Case:

https://github.com/KennethhPoenadi/Selection_Openway

Test Documentation

The objective of this automated test is to validate the main e-commerce flow on Periplus, specifically the login, product search, add-to-cart, and cart verification process.

This automated test focuses on the main add-to-cart flow of the Periplus website. The scope includes opening the website, logging in with a registered account, searching for a product, adding an available product to the cart, and verifying that the product appears in the shopping cart.

This test does not cover checkout, payment processing, order confirmation, or account registration because the registration process includes CAPTCHA and must be completed manually.

The test verifies that:

- Google Chrome can be opened successfully.
- The Periplus website can be accessed.
- A registered user can log in using valid credentials.
- A product can be searched using a keyword.
- An available product can be added to the shopping cart.
- The cart count increases after adding the product.
- The selected product appears in the shopping cart.

Automated Test Tools

Tool / Technology	Description
Java	Programming language used to write the automated test
Selenium Web Driver	Tool used to interact with the browser
TestNG	Testing framework used to organize and execute the test
Gradle	Build automation and test execution tool
Google Chrome	Browser used to run the test
Periplus Website	Target website for the end-to-end test

Test Case Details

Field	Details
Test Case ID	TC_CART_001
Test Scenario	Verify that a logged in Periplus user can search for a product and add it to the shopping cart
Priority	High
Severity	Critical
Test Type	End-to-End Automated Test
Website URL	https://www.periplus.com/
Browser	Google Chrome
Default Product Keyword	Meditations

Preconditions

Before running the test, the following conditions must be fulfilled:

- Java 17 or newer is installed.
- Gradle is installed.
- Google Chrome is installed.
- Internet connection is available.
- A Periplus test account has been registered.
- The Periplus test account has been activated through email.
- Login credentials are stored using environment variables or passed through system properties.

Test Data

Data	Description
PERIPLUS_EMAIL	Email address of the registered Periplus test account
PERIPLUS_PASSWORD	Password of the registered Periplus test account
Product Keyword	Keyword used to search for a product. The default keyword is Meditations

Test Steps

Step No.	Test Step	Expected Result
1.	Open Google Chrome in a new window	Chrome browser opens successfully
2.	Navigate to https://www.periplus.com/	Periplus homepage is displayed
3.	Open the login page	Login page is displayed
4.	Enter valid email and password	Login fields are filled correctly
5.	Submit the login form	User is successfully logged in
6.	Search for a product using the product keyword	Search results are displayed
7.	Select the first available product with an Add to Cart button	Product detail page or product section is opened
8.	Click the Add to Cart button	Product is added to the cart
9.	Verify that the cart count increases	Cart count increases by one
10.	Open the shopping cart page	Shopping cart page is displayed
11.	Verify that the selected product appears in the cart	Product title is displayed in the shopping cart

Expected Result

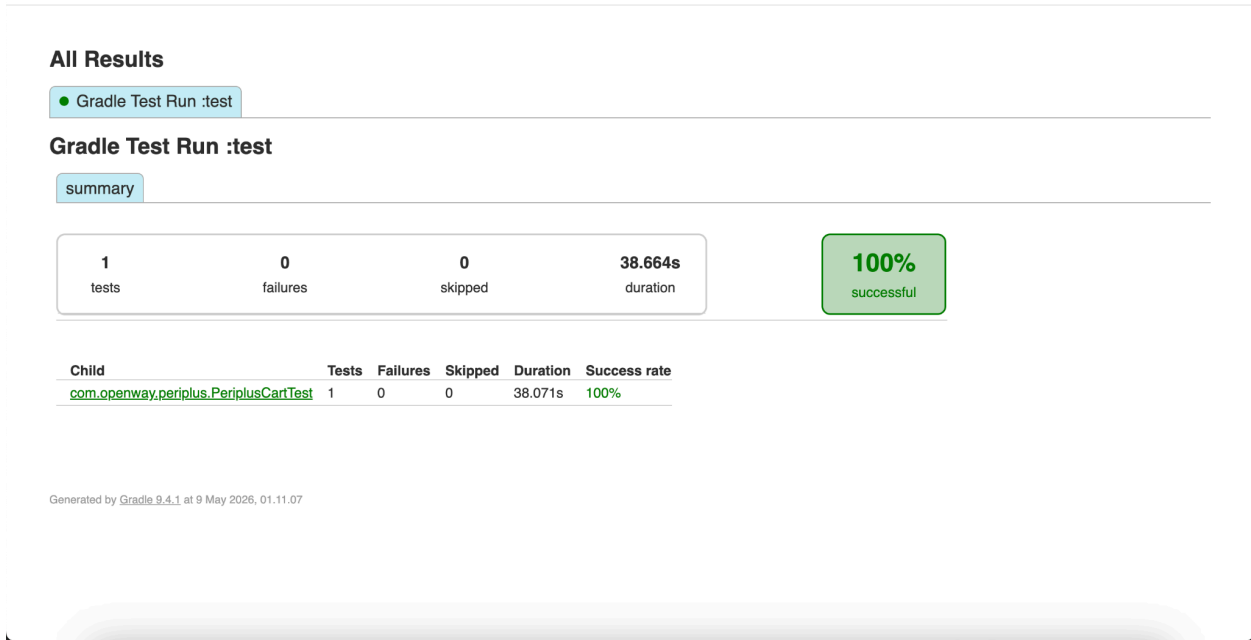

The test is considered successful if:

- The user can log in successfully.
- The product search returns available products.
- The selected product can be added to the cart.
- The cart count increases after the product is added.
- The selected product title appears in the shopping cart.

Actual Result & Status

The actual result and test status can be seen in the generated index.html report located in the provided GitHub repository under the following directory:

build/reports/tests/test/index.html

Based on the generated Gradle test report, the automated test case was executed successfully. The report shows that all test cases passed, with 1 test executed, 0 failures, and 0 skipped tests. Therefore, the status of TC_CART_001 is Passed.
